HORNE 5 PROJECT
THE NEXT MAJOR MINING PROJECT IN ABITIBI

ANNUAL MEETING OF SHAREHOLDERS
November 13, 2019

www.falcores.com | FPC: TSXV
Forward-Looking Statements

Certain information in this presentation constitutes forward-looking statements, including all information regarding our plans, plans and future performance. All statements other than statements based on historical fact are forward-looking statements. The words "expects," "believes," "anticipates," "will," "intends," "estimates," "forecasts," "budget," "schedule," or similar expressions are terms indicating forward-looking statements. Forward-looking statements are necessarily based on a number of factors and assumptions that, while considered reasonable by management, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those anticipated in the forward-looking statements.

These factors include, but are not limited to: changes to current estimates of mineral reserves and resources; the availability of labour; litigation; the availability and higher costs associated with contractors and exploration equipment; the speculative nature of mineral exploration and development activities, including the risks associated with obtaining the required permits and approvals in a timely manner; disputes over title deeds; uncertainty about the Company's ability to raise required funds to implement its business plans; changes in government laws at the local and national levels in Canada; the risk of loss due to sabotage or civil unrest; risks arising from the ownership of derivative instruments; and business opportunities that may be affected by the Company. Many of these uncertainties and contingencies may affect our actual results and could cause our actual results to differ materially from those expressed or implied by forward-looking statements made by us or on our behalf. The reader is cautioned that forward-looking statements are not guarantees of future performance. Furthermore, in addition to being subject to the applicable legal framework, the development of the Horne 5 Project is subject to a contractual framework whereby the obtaining of the required license to operate from the neighbouring operator is subordinated to the entering into a comprehensive financial guarantee arrangement with such operator in order to provide adequate financial protection to this operation. Once this condition precedent will be achieved, the Company and the neighbouring operator will establish a work plan for the further development of the Horne 5 Project, including operational parameters to be complied with by the Company in order to maintain the primacy of the neighbouring operation, the whole, in accordance with the agreed upon contractual framework. Based on the foregoing, the Company will not be carrying any major development activities prior to finalizing a satisfactory comprehensive financial guarantee framework with the neighbouring operator and thereafter agreeing on a mutually satisfactory work plan for the conduct of such activities.

Except as required by applicable law, the Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Cautionary Note to U.S. Investors Concerning Measured, Indicated and Inferred Resources

The terms "measured resources", "indicated resources" and "inferred resources" are used in this presentation. We advise investors that while these terms are recognized and required by Canadian regulations, the United States Securities and Exchange Commission does not recognize them. Under Canadian regulations, inferred mineral resource estimates cannot be used as a basis for feasibility studies or other economic studies. Investors in the United States are cautioned not to assume that measured or indicated mineral resources will eventually be converted, in whole or in part, to mineral reserves. Investors in the United States are also advised not to assume that some or all of the inferred mineral resources exist, or that they may be economically or legally exploited.
Experienced Team

EXECUTIVE MANAGEMENT

Luc Lessard  
President, CEO & Director

Anthony Glavac  
CFO & VP, Corporate Controller

Ronald Bougie  
VP, Eng. & Construction

François Vézina  
VP, Technical Services

Christian Laroche  
VP, Metallurgy

Hélène Cartier  
VP, Env. & Sustainable Dev.

André Le Bel  
VP, Legal Affairs & Corporate Secretary

Guy Belleau  
General Manager & Community Relations

Former members of Canadian Malartic development, construction and operating teams

Among Prolific Neighbors

Holder of 67,000 hectares of exploration ground around the historic Horne Mine in Abitibi
Southern Abitibi Greenstone Belt

50 gold and base metal mines currently or historically active in the Rouyn-Noranda mining camp.

Rouyn-Noranda camp produced 19 Moz of gold and 2.9 Blbs of copper, but still remains very underexplored for gold.
Important Milestones

- Discovery of the Horne Mine (1923)
- End of mining operations (2.5Blbs Cu & 11.5Moz Au) (Sept. 2012)
- Initial production (1927)
- Falco acquires the properties (Sept. 2012)
- NI 43-101 Horne 5 resource estimate (March 2014)
- Confirmation Drilling Program at Horne 5 (Aug. 2013)
- New geological resources update and publication of the PEA (2014)
- Filing of Feasibility Study (2015)
- Digitization & compilation of Horne historical drill results (Aug. 2013)
- Filing of Environmental Impact Assessment (2016)
- Project authorization & permitting (2017)
- Project authorization, permitting and project financing (2018)
- End of mining operations (2.5Blbs Cu & 11.5Moz Au)
Combining All the Right Elements

Experienced Team
- Experienced mine builders and operators with track records
- Innovative management
- Strong institutional support and backing by Osisko Gold Royalties
- Well positioned to advance the Horne 5 Project

Project
- Mondial class asset
- One of the largest gold projects in North America
  - Reserve (P+P): 6Moz AuEq
  - Resource (M&I+Inf): 10+Moz AuEq
- Robust business model
- Annual production ±340k oz AuEq for 15 years
- Ready for development

Jurisdiction
- Québec is consistently a top 10 mining jurisdiction (Fraser Institute)
- Horne 5 is located in a historical mining community
- Clear legislation and permitting pathway

Approach
- Strong support at all levels (community, provincial and federal)
- Multiple community focused initiatives
- Low environmental impact project
Substantial Upside to Feasibility

HORNE PAST PRODUCTION:
53.7 Mt @ 6.1 g/t Au, 13 g/t Ag, 2.22% Cu
For 11 Moz Au & 2.5 Blbs Cu

Continuity of operation of the Horne Mine
(world-class deposit)

Mining reserves : 81 Mt
(2.36 g/t Au Eq)

Inferred resources : ± 21.5 Mt
(2.51 g/t Au Eq)

Potential for increasing life of
mine (LOM) at depth
Major VMS System

Quemont 2  Horne

HORNE 5
Thickness of the mineralized zone of more than 100 meters (facilitates bulk mining)

Horne 5 - A World Class Project

Reserves

• 6 Moz Au Eq. (Proven/Probable)
  – Contained gold: 3.7 Moz
  – Recovered gold: 3.3 Moz
• ±10 Moz Au Eq. (including M&I and Inferred Resources)

Estimated average annual payable gold production

• 219,000 oz Au, over 340,000 oz AuEq

VMS polymetallic deposit

• Favourable to bulk mining methods

Underground mining operations (+16,000 tpd)

• 81 Mtonnes @ 2.36 g/t Au Eq.
• High level of automation/teleoperation
• > 15 years with the potential of 10 additional years at depth

Investment of more than C$ 1 billion

Horne 5 will be one of the most technologically advanced and efficient hard rock underground mines in North America.
Mining

Ore body specifications
- Vertical and massive deposit
- Low-grade
- Transverse long-hole stoping
- Exceptional rock quality
- Very low dilution level (<3%)

Depth → 650 m to 2,400 m from the surface

Opportunity for using the latest technologies
- Remote operation, automation, robotics, AI & electric vehicles to enhance:
  - Productivity
  - Equipment availability
  - Safety
  - Talent management
  - Savings on maintenance costs

2 Phases of stope development
- Phase I: using the existing Quemont shaft
- Phase II: requires the deepening of the Quemont shaft

Requires the dewatering of the historical mine (11M m³)

*Under revision*
Opportunities for costs savings on mining operations

Increasing the size of the electric underground mining load-haul-dump loaders (LHD) from 21 to 25 tonnes
Processing

Mill throughput
  • ±16,000 tpd

Primary – secondary grinding

Cycloning/flotation circuit
  • Copper concentrate @ 16% Cu (±130 tpd)
  • Zinc concentrate @ 52% Zn (±200 tpd)
  • Pyrite concentrate

Pyrite concentrate regrinding circuit (±10 microns)

Tank leaching

Carbon in pulp

Elution and refining
  • Silver-gold doré bar

Cyanide destruction circuit

Tailing disposal:
  • Underground: Paste/hydraulic backfill
  • Surface: Thickened tailings (Historical Norbec Site)

Fraser Institute Top 10

TSX-V: FPC falcores.com
Since the beginning of 2019, Falco has entered into the following financing arrangements:

- Silver Stream with Osisko Gold Royalties of up to C$180 M (payable in instalments)
- C$10 M secured loan

Falco is continuing its efforts to finance the project development under various arrangements:

- Silver Stream Agreement ±C$180 M
- Exportation credit agencies ±C$200 M (Equipment financing)
- Debt financing ±C$270 M
- Equity financing ±C$500 M
Environment

A Clear Timeline to De-Risk Horne 5

**PERMITTING**
- Consultations – public hearings (BAPE - 2020)
- Community consultation created
- Filing of environmental impact assessment

**2020**
- Start of geotechnical studies supporting neighbor’s authorization of the project.
- Silver stream financing to provide C$180M
- Release of positive feasibility study

**2019**
- \[\text{Project financing} \]
- \[\text{Advance discussion with neighboring partner} \]

**2018**
- Community consultation created

**2017**
- Environmental study

**FALCO RESOURCES**
Advancing Stakeholder Discussions

Falco continues the discussions with its neighboring partner to obtain the authorizations required for the next steps in the development of the Horne 5 Project.

- Geotechnical investigation
- Financial guarantee
- Operating licence
2020 Main Focus

• Receive all required third-party approvals to start the Project’s development program
• Obtain acceptability from Québec Government to be able to initiate BAPE process in second half of 2020
• Obtain project financing
• Initiate the construction of dewatering infrastructures by the end of 2020/beginning of 2021
• Create shareholder value
